

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The table is organized into three main sections: Demographics, Socioeconomics, and Attitudes. Each section contains a list of variables and their corresponding coefficients, standard errors, and p-values. The overall R-squared value is 0.15, indicating that the model explains 15% of the variance in the number of children in the household.
